

a plurality of television display structures at said central station for providing a display from said representative image television signals and for providing and manifesting audio signals;

H1  
telephonic interface apparatus for interconnecting said television communication structures at said plurality of remote locations and said central station to provide two-way audio and at least one-way video communications;

a memory unit for storing identification designation data, time sequence data and remote location data on said plurality of remote locations; and

a control computer coupled to said memory unit and said telephonic interface apparatus and programmed to sequentially and automatically actuate, said telephonic interface apparatus, under control of said computer, in accordance with said identification designation data and said time sequence data to selectively communicate from said plurality of remote locations to one of said plurality of television display structures.

---

77. (Amended) A system for communicating with a plurality of remote locations from a central station utilizing dial-up telephone facilities comprising:

television communication structures at said plurality of remote locations for telephonically providing representative dynamic image television signals and for telephonically providing audio signals to carry voice;

H2  
a plurality of television display structures at said central station for providing a display from said representative image television signals;

telephonic interface apparatus for interconnecting said television communication structures at said plurality of remote locations and said central station to provide at least one-way audio and at least one-way video communications;

a memory unit for storing programmed operations for sequential remote location communication including identification designation data relating to the plurality of remote locations; and

a control computer coupled to said memory unit and said telephonic interface apparatus for sequentially actuating in accordance with said programmed operations said telephonic interface apparatus to selectively communicate in sequence from said plurality
